

AsiaPak

Asian Language Machine Translation

Technology Overview

Language translation is a software solution to the differences of languages between the communities. With the shift in emphasis from the automated quality translation to the automated useful translation, Machine Translation has been seen as a practical tool for a wide spectrum of applications. AsiaPak is such an enterprise solution for Asian languages.

Instant Messaging

Text Translation

File Translation

Technology Features

- Adaptable translation models for better cross-domain performance
- Focus on bi-directional South-east Asian languages
 - Chinese, English, Indonesian, Malay, Thai, Vietnamese

Potential Applications

- Document translation: translates documents (MSWord, PDF, HTML, Text) with format retention features; ideal for first-drafts and understanding gist of contents
- SMS translation: send and receive translations via SMS on your mobile phones
- Chat translation: real-time instant messaging with translated conversation

Potential Applications

- Simplify exchange of multilingual information by enabling translation - ready content in your language.
- Enhance the access of multilingual information to increase your competitive intelligence.
- Reduce translation costs and turnaround times, especially for high volume of technical translations.
